Atopic dermatitis (AD) is a common pediatric inflammatory skin disorder, affecting about 15 to 20% of children. Food allergy is more common in children with AD, and the relationship between these two diseases is complex, often leading to misconceptions among patient families and even providers. In this session, we will review AD and food allergies throughout childhood, discuss the relationship between early-life eczema and development of food allergies, as well as review several areas of novel research investigating these diseases and their relationship.

Featured Speakers

Michael Sherenian, MD
CCHMC

Accreditation:

In support of improving patient care, Cincinnati Children's Hospital Medical Center is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME), the Accreditation Council for Pharmacy Education (ACPE), and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team.

This activity has been approved for *AMA PRA Category 1 Credit™*.
