

## User Experience Guide for Adaptive Mode

**Adaptive course:** This course uses your input to adapt content and questions to adjust to your needs. The amount of time it takes to finish is solely based on your own interactions. Unlike other eLearning courses, adaptive courses can present questions before content in order to determine your knowledge. Think of the experience more like a 1-1 tutor who is guiding you through the content. The course will determine when you need content or you are ready to receive questions to test your knowledge.

If you have the option of accessing an adaptive course and a practice set, be aware that they are linked in the backend. If you start a practice set, the accompanying stand-alone module will show progress. If you start an adaptive module, the probes will be marked complete in the practice set. You will receive a credit whether you complete the adaptive module or the practice set.

### Adaptive Learning Experience

	<p>The Rhapsode LEARNER™ dashboard gives you direct access to adaptive modules built in Rhapsode CURATOR™. On the left you will see modules that you have already completed (in the “Sustain” column), in the center section, the modules that you are about to launch, and on the right, the modules that you will take in the future.</p>
	<p>Adaptive Mode learning tiles are colored teal.</p> <p>On each panel you can see the name of the content module and the estimated number of minutes it should take you to master the content.</p> <p>Area9 Rhapsode™’s focus is to help you master the content, not simply complete the course. The projection is specific to the course, and specific to you as a learner. On the top is an indication of the total progress you’ve made in all of the modules you’ve interacted with.</p>

	<p>In the content modules, on the left-hand side, you'll see coach text/audio that accompanies the learning content. The coach behaves much like a human tutor would do. It provides additional explanation to support what is being shown on the main part of the screen using both text and voice over.</p>
	<p>You may receive questions before content. You'll also self-assess your confidence on each question, which improves learning and helps the adaptive engine adjust to meet your needs by identifying strengths or misconceptions you may have.</p> <p>In the Bottom Left corner, you will see your current self assessment level.</p>
	<p>At the top of the screen you'll see a progress bar.</p> <p>Unlike traditional e-learning, this is not a measure of how much content you have seen - this is the progress the you have made towards becoming proficient in this subject.</p>

 <p>The screenshot shows a user interface with a header containing 'HISTORY' and 'TABLE OF CONTENTS'. Below the header is a list of items: 'Current objective' (with an unselected radio button) and 'Module Introduction' (with a selected radio button). A downward arrow is visible at the bottom of the list.</p>	<p>On the right is the history pane: a sequential list of the learning objectives and learning content that you have interacted with. At the bottom is a constantly updating projection of the amount of time that the system believes it will take you to master the content. This is a personalized estimate and will update continuously based on your interactions and answers.</p>
	<p>You can return to the dashboard at any time by clicking the ☰ menu icon and clicking "Dashboard".</p>
